

Ivan Reshetnikov

Senior ML / AI Engineer

resivalex@gmail.com

<https://www.linkedin.com/in/resivalex>

<https://github.com/resivalex>

Senior ML / AI Engineer with 10+ years in software engineering and 5+ years in applied Data Science.

I build production ML systems for real business problems: matching, ranking, duplicate detection, pricing, anomaly detection, forecasting, and LLM/RAG-assisted data workflows. I usually work end-to-end, from understanding the problem and defining metrics to building, deploying, and improving the system after release.

Work Experience

Senior ML Engineer

Aug 2024 - Present

[Maksmart](#)

Building production ML systems for a B2B marketplace: product matching, duplicate detection, pricing, anomaly detection, catalog quality, delivery forecasting, and LLM/RAG-assisted data workflows.

- Shipped 8 ML models to production across matching, pricing, catalog quality, and forecasting.
- Built a product matching system that reduced unmatched supplier offers by 2x.
- Developed duplicate scoring for implicit product duplicates, reducing duplicates by 60% at 95% precision.
- Built price regression with confidence estimates to support supplier offer moderation.
- Implemented price anomaly detection to identify unit-of-measure issues, data-entry errors, and suspicious supplier prices.
- Implemented last-mile delivery time forecasting with under 15% error.
- Designed LLM/RAG-assisted workflows for product type discovery, catalog maintenance, and data labeling.
- Built data processing and data quality pipelines, reducing memory consumption by 5x.

Data Scientist

Apr 2022 - Jul 2024

[Architech NYC](#)

Built production ML, analytics, and automation tools for transportation and business operations: rate calculation, document validation, BI reporting, and email workflow automation.

- Built a container transportation Rate Calculator with 11% RMSPE, monitoring, and regular retraining.
- Developed an OCR-based document validation service with 95% precision, reducing dispatcher workload.
- Built BI dashboards for transportation operations, improving visibility and reducing manual reporting.
- Implemented an AI-assisted email handling system using ChatGPT API and business data integrations to reduce response times.
- Investigated data consistency issues and prepared ad-hoc analyses for current business needs.

Machine Learning Engineer

Dec 2020 - Mar 2022

[Sape](#)

Applied ML to SEO and search products operating on millions of documents: semantic search, topic classification, text similarity, and price recommendation.

- Built a semantic backlink search system across millions of documents, reducing search latency from about 12 seconds to 3 seconds.
- Replaced mostly tag-based or random backlink discovery with similarity-based recommendations.
- Improved backlink suggestion relevance, contributing to positive user feedback and continued investment in the feature.
- Developed topic classification, text similarity, and price recommendation models for SEO workflows.
- Analyzed product usage and dissatisfaction signals to support SEO specialists and product decisions.

Lead Ruby on Rails developer

Dec 2016 - Nov 2020

[Sape](#)

Led backend and full-stack development for an ad-tech product integrating multiple advertising platforms. Worked on technical decisions, API design, code review, testing, deployment, monitoring, and frontend modernization.

- Adapted the API for both external users and frontend use, reducing duplicated integration logic.
- Built tools for advertising analytics, moderation-state synchronization, and campaign management.
- Added system problem-detection tooling to make operational issues easier to find and investigate.
- Implemented interactive UI features such as weekly schedules, bulk copying, and ad previews.
- Supported frontend migration from CoffeeScript/jQuery to ES6 and React.
- Helped unify account-wide UI layout and styling.

Ruby on Rails developer

Apr 2016 - Nov 2016

[Lakehouse](#)

Supported and developed Ruby on Rails applications for real estate process management and professional qualification workflows.

- Supported and developed a real estate process-management project.
- Supported and developed a qualification/training project for beauty specialists.
- Worked on backend features, tests, deployment, and legacy frontend maintenance.

Software developer

Apr 2015 - Jan 2016

[Nasca Ltd.](#)

Worked on web development and trading-related software in a Scrum team. Built backend features, contributed to C++ networking components, wrote unit tests, and participated in code review.

- Developed a public website from scratch.
- Built parts of a multi-component network application for exchange-related workflows.
- Implemented a component responsible for interaction with the exchange.
- Contributed to Qt client design and implementation.
- Added unit tests using the Catch framework.
- Used design patterns and participated in code review.

C++/Qt developer

Dec 2012 - Sep 2013

[Nasca Ltd.](#)

Worked on trading-related desktop and backend tools, including trading engine improvements, log processing, exchange emulation, and automation utilities.

- Improved components of the trading engine.
- Built tools for exchange log parsing and analysis.
- Implemented features for transaction logging software.
- Developed an exchange emulator for testing and development.
- Added automated exchange log downloading and user email notifications.
- Used version control in a small engineering team.

Core Skills

Senior ML Engineer: Python, PyTorch, scikit-learn, LightGBM, fastText, AutoML, Active Learning, LLM/RAG, embeddings, FastAPI, Docker, PostgreSQL, ClickHouse

Data Scientist: Python, LightGBM, PyTorch, Streamlit, FastAPI, PostgreSQL, Docker, Apache Superset, ChatGPT API, pytest

Machine Learning Engineer: Python, scikit-learn, fastText, word2vec, Gensim, Pandas, NumPy, ClickHouse, Flask, pytest, Jupyter, Power BI

Lead Ruby on Rails developer: Ruby on Rails, PostgreSQL, RSpec, Cucumber, Capybara, Docker, Jenkins, Capistrano, React, ES6, Redux

Ruby on Rails developer: Ruby on Rails 4, PostgreSQL, RSpec, Capybara, Capistrano, Linux, AngularJS, CoffeeScript

Self-education: Ruby on Rails, RSpec, Linux, Capistrano, AngularJS, CoffeeScript, PHP, HTML, SASS, MySQL, D3.js, SVG

Software developer: Ruby on Rails 4, Ruby Slim, JavaScript, CSS, SASS, Bootstrap, AJAX, C++, Boost Thread, WebSocket, JSON, Catch, JIRA, Confluence, Git

C++/Qt developer: C++, C++ Standard Library, Qt, JavaScript, jQuery, HTML, SVN

Education

Pskov State University

2008 - 2013

Master's degree Informatics (*Information Systems and Technologies*)

Languages

Russian (*Native*), **English** (*Upper Intermediate*)
